# CSCI 3321 - Client Server Web Programming Spring 2021

Homework 03 - Landing Page

Tasks

1. Building an Index Page

Build a web page that looks like the image below and name the web page **index.html**, and save it under the "src" folder in your Visual Studio Code.

Inside this nav element create 4 anchor tags for each of the following: "Resume", "About Me", "My Portfolio", "Contact Me". The anchor tags do NOT need to be clickable at this moment.

You may use the SFA logo for the "Logo".

Add a picture of your choice for "#ProfilePic".

Create an <h1> element with your full name in it. And below it, create an <h2> element with your current title: Student of Your_Department.

You can skip the <button #Portofolio />

2. Adding Style

Create a .css file under the "style" folder in VS Code and name it "style.css".

Link the style file in your **index.html** file.

Use the CSS knowledge you learned in the class to style your index.html. Imagine you are a professional web developer and you are asked by your customer to develop a professional-looking web page, which means you need to carefully choose the text color, font, background image and/or color, and the layout.

Homework Submission

1. After you finished the web page, push your project to your GitHub account
2. Go to D2L and post in the comment box **the link to your project's repository. No screenshots, no HTML code!**
